Birdhouses, Feeders You Can Make by Hi SibleyBy CDP's Onceagain habit of purchasingI recently purchased "Birdhouses, Feeders You Can Make by Hi Sibley in Paperback, to add to an ever growing collection of construction of Birdhouses and feeders, not to build all of them, but to see what others have come up with to provide shelter for nesting and roosting birds and provide encouragement to have birds come to your area, neighborhood and your own yard. This book is what I would call a beginners building book as it has the basic bird house as it's purpose, with some detailed, well laid out plans for building houses and feeders. Hand drawn, it appears to be anyway, this book gives each plan and proposed house a page or so to show the general look the house or feeder is going for, and enough detail to let you use the design to make your own size in several cases or to build to the specifications the house is given. From Martin community house to Tube designed vertical bird homes, to window box feeders this book let you see where you may go to put a bird house or feeder out in your own yard, specific to the birds you would want. I really like this book, as it builds on a knowledge base and lets my imagination go forth to design and build my own houses and feeders. Thank you, Hi Sibley!0 of 0 people found the following review helpful. Inexpensive birdhose idea bookBy CharlieSSimple, detail free rawings of birdhouse designs. I first ran into a copy of Sibley's book in the late '70s and was glad to find a replacement.0 of 0 people found the following review helpful. Four StarsBy Gene Hackergood ideas.

Project book provides more than 85 patterns for house and feeder styles suited for many different kinds of birds.
