Mr Sam McCoy : 4 Foot Farm Blueprint before purchasing it in order to gage whether or not it would be worth my time, and all praised 4 Foot Farm Blueprint:

500 of 510 people found the following review helpful. Woefully inadequateBy SanLynn 36What is there is well written, but, boy oh boy, there is inadequate information for beginners. For instance, on the indoor hydroponic supplies list, there is one timer. Nowhere does it state if it's for the lights (which are listed under hardware) or the pump. How often to use the pump and what the criteria are is also neglected. Should the Nufoam - which is listed as 2

yards on the list, but referred to as needing 3 yards elsewhere - be kept moist constantly? Are the roots supposed to grow into it and thus get their nutrient enriched water or do the small plugs get the nutrients through osmosis by touching the fiberfill and, again, how wet does it need to be? If the roots are not supposed to grow into the Nufoam, could they possibly grow enough in just the plug? Under Hardware, it lists T12 bulbs/fixtures. Well, it is my understanding that T12s have been banned since at least 2011. The "large plastic tub" listed - how many gallons are defined as large? And is this home-built system, which will cost at least several hundred dollars, be able to survive more than one growing season or does it have to be rebuilt each time? Anyway, there's lots more questions, but I appreciate the beginning of the beginning and the plant grid suggestions. I will have to do a lot more research, however, before I have the full blueprint. 314 of 320 people found the following review helpful. Don't waste your money. By Bill Gilbert The editing is bad (typos), the building instructions are terrible and the information is often questionable. Spend a little more and get "The Square Foot Garden Book". You'll be much happier. 422 of 433 people found the following review helpful. Rip Off. By David Pinkston I was stupid enough to try the \$7 order ebook through their video ad and I should have known better. It is just a big rip off to force one to watch the rest of his ads for their other 10 pamphlets before you can download your pamphlet of interest. Tired of their BS ads I closed the browser. It is a rip off and they still haven't sent me an email to access the book. It is just a bunch of crap. From the other reviews I say don't buy it unless you are interested in hydroponics.

In just a few minutes of reading you're going to uncover a sneaky, yet legal way to claim healthy, mouthwateringly delicious food for just pennies on the dollar. A method that could cost overpriced grocery stores a LOT of money. Its designed based on simple food secrets rediscovered by international botanist Patrick Blanc. ...and reaches back to techniques uncovered by ancient Babylonians. Its all based on growing your garden vertically instead of the normal, space-wasting horizontal way. The best part is this blueprint gives you a simple method to grow your food with no more than 4 square feet of space.
