Superb written information if you already know all of the native plants.Planter630 of 0 people found the following review helpful. Five StarsBy Jennifer A. BradleyA terrific guide for anyone wanting to learn more about successful gardening. Start with knowing your soil!1 of 1 people found the following review helpful. Good book delivered on timeBy David BrownDelivered as advertised and quite thorough on PA plants

A comprehensive reference and discussion about how to plan and develop landscape designs using native plants, with a focus on the northeastern counties of Pennsylvania. Covers 2,150 species of trees, shrubs and herbaceous perennials and annuals, 100 kinds of regional soils, and 135 ecological communities with detailed plant associations for each. Also included are the 540 protected plant species in Pennsylvania, invasive species of local concern, plant sources and additional resources for native plant enthusiasts.

About the Author Geoffrey Mehl comes from several generations of gardening enthusiasts and turned to native plants as problem solvers for difficult landscape situations as well as environmental responsibility. He organized Pennystone Gardens - which has since evolved into The Pennystone Project - in 2003 to concentrate on researching Pennsylvania native plants for both sustainable landscaping and horticultural value. Mehl is active in several environmental and horticultural organizations. This book and the companion website, www.pennystone.com, were produced to encourage gardeners to investigate and use native species in a variety of landscape designs.
