work of IDing you plant photos when you get home. Lots of interesting info too--the author gives growing tips in case you care to try growing some of these gems around your home. A great book whether you are an "arm chair traveler" or an ardent plantaholic. 1 of 1 people found the following review helpful. ExcellentBy David CammackThis book got me started growing alpiners. All the major plants are covered, including Astragalus, Penstemon, Phlox, Eriogonum etc. Great photography throughout. This book is especially useful for those who want to grow plants from seed as it gives tips on each species. Graham has gained his knowledge and experience from actually growing these plants. Although the focus of the book is on Alpines, any gardener in an arid/high altitude region will find this book interesting. 0 of 1 people found the following review helpful. Four StarsBy Seeds4changeArrived quickly and item was as described.

This is the first comprehensive pictorial look at the American mountain flora from the southernmost Rocky Mountains to the Brooks Range of Alaska. Approximately 650 species in 54 genera are discussed, with many subspecies, varieties, and hybrids also described. Intended to be as useful for the gardener as the traveler, each entry concludes with a discussion of propagation and cultivation information, as well as warnings about pertinent pests and diseases. The 495 color photographs are not only lovely but they also give the reader an idea of the range of alpine plants growing in North America.

"For anyone with an interest in plants of Western North America, this book is a must have." -- Alan Grainger, *The Alpine Garden*, September 2002
About the Author
Respected British nurseryman Graham Nicholls, who draws upon nearly half a century's experience in growing alpine plants, has enjoyed particular recognition for his cultivation of award-winning dwarf campanulas. He has won several gold medals at Alpine Garden Society (AGS) shows and is a three-time recipient of the prestigious Farrer Medal. Now a national judge for the AGS, he lectures regularly in the United Kingdom and the United States. He has contributed to the journals of the AGS (*The Alpine Gardener*) and the North American Rock Garden Society (*Rock Garden Quarterly*), and in 2002 he published *Alpine Plants of North America: An Encyclopedia of Mountain Flowers from the Rockies to Alaska* (Timber Press).
