Robert Buist Hibbert And Buist : American Flower Garden Directory (Classic Reprint) before purchasing it in order to gage whether or not it would be worth my time, and all praised American Flower Garden Directory (Classic Reprint):

Turing months, (till A pril) is preferred. The foliage is of a beautiful 1, light a verdure as to form a striking contrast,

with the numerous ring near the corolla, render it worthy a place in the most limited cold small pots in August, in a compost of two parts loam, one part well rid, leave them out until frost, then bring them in doors, and place near in full leaf and show promising flower buds. After they have done their rings, but at no time entirely cease; and during the summer months, in a gentle moisture. Under such treatment they will increase every year; one bulb will send up upwards of three hundred flowers in a season. is about the beginning of May in a bed prepared for their reception. Dig it by giving it a good supply of manure one year old, well broken and laid where the soil is heavy. Black earth from woods produced from rot sand. Having the ground in proper order, draw drills about three inches deep; plant the bulbs (after divesting them of their offsets), nine inches apart in a row and a half. When done, rake and finish off the beds. When they eat roots for their support. foliage, take them up, and dry them thoroughly, either in the sun or in a stove. Foliage and fibres, and pack them in boxes in dry sand, or moss. Store airy room or dry cellar, where they will at all times be exempt from very splendid flowering Bulb, a native of the Cape, and of but recent introduction large and of a bright orange color, beautifully shaded with crimson, upwards of three feet high, and often with three flower stems to each of a brilliant green adding greatly to its appearance Culture very near the garden, the last week of April, or early in May. A good method appears above ground, is to plant it in a small pot; keep in the house, until the middle of May, when turn it out of the pot into the ground a southern or eastern exposure no care is necessary, but it would be better to tie it, and to which tie as it grows up (Typographical errors above are due to OCR software and don't occur in the book.)
