This is a really useful book for those starting out with aquaponics. Gives enough information for a rank beginner to get started. And having the author tell what effects her mistakes had is super helpful. 0 of 0 people found the following review helpful. worth recommending

Impressive! Aquaponics is indeed a breakthrough innovation to grow plants that we cannot usually do with little space at home. I have been doing a lot of reading lately on how to plant and grow the best produce at home but I find some suggestions difficult to implement since I don't have a lot of space for a garden. Worth recommending!

Master a System that Can Feed You, Your Family, and Even Give You More than Enough to Sell Afterward if You Want
This book contains information on my experiences on aquaponics. I've included the successes and the failures so you can learn about this amazing method to grow your own food. Popular writer T. L. Campbell said that you're not an aquaponics farmer until you've killed fish, well you can be, but if you're going to learn to set up a system bigger than a bucket and a few goldfish this is true. You'll kill plants and fish; you'll have days when you wonder why you've sunk so much money into something that is driving you nuts (especially those darned nitrogen strips). But at the end of the day, you'll master a system that can feed you, your family, and even give you more than enough to sell afterward if you want. Within this book, you'll find the answers to these questions and more. Just some of the questions and topics covered include Why I Chose Aquaponics
In Depth: The Nitrogen Cycle
Aquaponics
Designing Your System
Before You Start
Getting The Bacteria Right
Choosing Living Creatures
Troubleshooting and Maintenance
And much more!
Like most comprehensive books we'll start with the basics and go from there. I've tried to make this information make sense even if you've no previous science or agricultural knowledge. Even if you've never so much as had a goldfish you can still master aquaponics. Buy the book now to learn more about Aquaponics
