**Alwyn H. Gentry : Bignoniaceae - Part II. (Tribe Tecomeae) (Flora Neotropica Monograph 25(II))** before purchasing it in order to gage whether or not it would be worth my time, and all praised Bignoniaceae - Part II. (Tribe Tecomeae) (Flora Neotropica Monograph 25(II)):

The author continues his study of Bignoniaceae with a treatment of the Tecomeae, including 19 native genera and 203 native species, plus 11 additional subspecies and seven varieties. Thirteen species and one subspecies are described as new; two new combinations are proposed. The systematic treatment is accompanied by an illustrated appendix on the wood anatomy of the Tecomeae by other authors.
