just the books specific projects. I was specifically hoping for a formula on how to lay out roof rafters, such as actual dimensions to a particular size building. Example: given, 18 ft wide with a 3/12 pitch. How long should the rafters be, how high will the peak be. How many rafters for a given length using a steel roof.5 of 5 people found the following review helpful. Good information that takes the mystery out of pole barnsBy RobGood information that takes the mystery out of pole barns, garages, and to some extent, sheds. If you really want info on building a shed get the book "Building a Shed" by Joseph Truini. He covers foundation options in much more detail.7 of 7 people found the following review helpful. Great BookBy MattI used this to build my 12 x 16 building. I didn't use the plans exactly but more as a guide. This book helps a DIYer refresh some basic building skills they may have forgotten since they last built a project. Very well written and very good plans. I am going to use this book for several of the plans in it.

A single blueprint for a garage, gazebo or shed can cost a consumer far more than the cost of this book. With more than 50 detailed plans with complete instructions, this book offers an amazing value for homeowners. More than 1,000 color photos and detailed, step-by-step instructions leave nothing to chance, allowing homeowners to easily save thousands of dollars, even if they only build one or two projects. This definitive book will be a treasured resource for years.
