From Frame Publishers : Bright 2: Architectural Illumination and Light Installations before purchasing it in order to gage whether or not it would be worth my time, and all praised Bright 2: Architectural Illumination and Light Installations:

The use of light and illumination in architecture and design is currently evolving and making an increasingly significant impact in various creative disciplines. Today, architects use light installations to create a different nighttime identity for buildings that allow for additional functions and presentations. Light is also important for interior designers, who use it to give the impression of a room where there isn't one or make a space seem bigger or smaller. Others use light to conjure works of art, forms, and images out of nothing or to give entire city centers a whole new look. In short: light is a magical medium for creative experimentation that today's designers are using to produce a

broad spectrum of exciting work. Bright 2 presents a rich selection of these innovative projects that are setting trends in the creative use of light. The included work has been implemented in both a commercial and cultural context around the world. Each designer or design company is featured in an eight-page spread that includes both stunning photography and detailed technical information. This inspiring volume is an up-to-date reference tool for professionals working in the fields of light design, architecture, and art. The book reflects the current role of illumination as a multifaceted and interactive design element. In doing so, Bright 2 literally sheds new light on the future of architecture and design.
