found the following review helpful. Good starter book By Michael Rayner Excellent small book for getting into cactus cultivation. Not overly technical. All color photos. Contains good plant directory also to give you a lot of ideas and info for different species to help you plan a garden or greenhouse. Bibliography, Equipment List, and Glossary a plus. Overall a comprehensive guide, just like it says.

Anyone can grow extraordinary and exotic cacti and succulents with confidence, using this fully-illustrated, inspiring and practical new guide. In its 80-page A to Z directory, gardeners encounter every strange and beautiful species and variety: sea-urchin-like astrophytum; woollily bearded espositoas; fiercely golden-spined ferocactus; bizarre-shaped tree-like cactus; hallucinogenic peyote; 40-foot high pachycereus, hanging donkeys tails; statuesque aloes, and ground-hugging, jewel-like flowering conophytums. Displacing the myths and legends, such as these plants dont need water or light, it offers comprehensive easy-to-follow instructions on building a collection; pests and diseases, seed raising; repotting; greenhouse cultivation; equipment; and more.

About the Author Tony and Suzanne work for the British Cactus and Succulent Society. Suzanne Mace is also a qualified judge of cacti and succulents.
