discovered Lynn Gillespie too late to ...By Larry T FosterI am a frustrated gardener. Year after year I plant massive gardens with poor results. I discovered Lynn Gillespie too late to have much effect on this year's results but started implementing some of the things in this book for some fall harvest and a little bit of experimentation. It all comes down to soil and she has a recipe for making soil for in the cinder blocks. Trying this has produced some darn good results so far. Almost weed free and stuff growing really well. Can't wait until spring to implement for a full season7 of 7 people found the following review helpful. Cinder block raised garden beds.. cheaper than plastic wood bedsBy mommaI just recieved the book today. It really is great. I was thinking of buying one of those plastic board raised bed kits but those are really expensive. With Lynn's way I can make more units with cinder blocks than I could with just a plastic raised bed. The soil mixture on one part, sand, peat moss, compost is a perfect blend. I am going to take her advice and have the bulk sand and compost delivered to save me even more money. I will have the lumber yard deliver the blocks also. Take her advice and buy the professional weed barrier cloth for under the beds and also the pathways. I am going to use pea gravel for the walkways. I am a disabled lady and I can once again get into my passion for gardening. I also will do this organically, now if I just could raise chickens or a nice Guernsey cow in her raised bed system, I would be self sufficient for food.0 of 0 people found the following review helpful. Five StarsBy Bruce McCleanGOOD BOOK

This book truly reveals the easiest gardening method. With this unique Cinder Block Gardening system you will transform your time consuming, "hard work" garden into a garden that is easy, productive and fun! The Cinder Block Garden system will put you in control of the garden, not the garden in control of you. Learn all the gardening short cuts that give you a no till garden, a virtually weed free garden, a garden that grows all your food on 1/4 the space and a garden that saves you time and money. Finally, gardening made simple and easy the way gardening should be.

From the Back CoverGrow more, in less space, in less time. Are you ready for the easiest, abundant, most successful garden you have ever had? Then you are ready for this book. Between the covers of this book you will learn: the easiest gardening method ever, made for the busiest person how to grow twice as much food in half as much space how to have a "weed free" garden safe, homemade remedies for killing insects how to make "never fail" garden soil how to save \$500 or more annually on your grocery bill the secrets to building a successful compost pile and many more gardening tips that make gardening a breeze!About the AuthorLynn Gillespie, brought up using organic gardening techniques, had an easy transition from school to a career in gardening. Lynn and her husband Tom built their own greenhouse complex 13 years ago that now covers almost 2 acres. Hydroponic food production was their first focus. Next, they expanded into bedding plants, house plants, perennials, trees, shrubs. In the last four years Lynn and Tom have taken their business on to the Internet, selling trees, books and non-hybrid vegetable seeds. After family, the vegetable garden is Lynn's first love. Living on an 130 acre farm high in the Colorado Rockies, she grows almost all of the produce for her family of five in a 43.5 unit cinder block garden. Canning, dehydrating, and freezing is all in a days work for Lynn. "The garden must be easy to take care of, use little time and grow lots of food because I have so many other things to do like running the kids around and working with the milk cow, chickens and rabbits," states Lynn. Lynn also writes for various publications on family food production and gives seminars on gardening.
