An indispensable reference book.By Leland StoneWide ranging and dense with both historical and technical detail, this volume counts as a must-have for the blacksmith who engages in decorative/architectural smithing. You may have seen the examples here in other volumes -- some of the grilles and screens, for example, will be familiar to those who've read d'Allemagne's book on architectural and decorative ironwork -- but they are presented here with notes on fabrication and assembly that lacking elsewhere.Recommended.

From grilles and gates to balconies and complex lock and key mechanisms, this book traces the successive styles of decorative French ironwork over its 700-year development. The authoritative work on traditional French architectural ironwork designs, from Romanesque to the Empire, the book's masterly black-and-white illustrations and concise explanations reveal the complex fabrication techniques and myriad elaborate foliate motifs employed by French craftsmen.
