Jane Taylor : Climbing Plants: A Kew Gardening Guide (Kew Gardening Guides) before purchasing it in order to gage whether or not it would be worth my time, and all praised Climbing Plants: A Kew Gardening Guide (Kew Gardening Guides):

Jane Taylor introduces over 400 climbing plants suitable for the garden or greenhouse. These plants can be some of the most useful in the landscape, providing beautiful cover for problem situations. Many of the plants she describes are magnificent specimens in the wild which bring vigorous grace and frequently fragrant blossoms to the cultivated garden. Chapters topics include the native habitats of climbers, control of pests and diseases, climbing plants for the greenhouse and conservatory, and climbers for selected sites and qualities. The heart of the book, however, is a handy A-to-Z of the most desirable climbers in cultivation.Published at \$19.95 Our last copies available at \$9.98
